DUNES

by michele leonardi architect ©

A 3D architectural rendering of a dune system. The dunes are composed of light-colored, textured material, possibly sand or a specific type of earth. The top of the dunes is flat and features a series of parallel, slightly raised ridges. Four vertical cutaway sections are shown, revealing the internal structure. The first two cutaways show a red, textured interior, while the last two show a dark, textured interior. The background is a solid blue color.
